

**Example 3: Converting Rational Numbers to Decimals Using Long Division**

Use the long division algorithm to find the decimal value of  $-\frac{3}{4}$ .

**Exercise 1**

Convert each rational number to its decimal form using long division.

a.  $-\frac{7}{8} =$

b.  $\frac{3}{16} =$

**Example 4: Converting Rational Numbers to Decimals Using Long Division**

Use long division to find the decimal representation of  $\frac{1}{3}$ .

**Exercise 2**

Calculate the decimal values of the fraction below using long division. Express your answers using bars over the shortest sequence of repeating digits.

a.  $-\frac{4}{9}$

b.  $-\frac{1}{11}$

c.  $\frac{1}{7}$

d.  $-\frac{5}{6}$

### Lesson Summary

The real world requires that we represent rational numbers in different ways depending on the context of a situation. All rational numbers can be represented as either terminating decimals or repeating decimals using the long division algorithm. We represent repeating decimals by placing a bar over the shortest sequence of repeating digits.

### Problem Set

1. Convert each rational number into its decimal form.

$$\frac{1}{3} = \underline{\hspace{2cm}}$$

$$\frac{1}{6} = \underline{\hspace{2cm}}$$

$$\frac{1}{9} = \underline{\hspace{2cm}}$$

$$\frac{2}{6} = \underline{\hspace{2cm}}$$

$$\frac{2}{9} = \underline{\hspace{2cm}}$$

$$\frac{3}{9} = \underline{\hspace{2cm}}$$

$$\frac{3}{6} = \underline{\hspace{2cm}}$$

$$\frac{4}{9} = \underline{\hspace{2cm}}$$

$$\frac{5}{9} = \underline{\hspace{2cm}}$$

$$\frac{2}{3} = \underline{\hspace{2cm}}$$

$$\frac{4}{6} = \underline{\hspace{2cm}}$$

$$\frac{6}{9} = \underline{\hspace{2cm}}$$

$$\frac{5}{6} = \underline{\hspace{2cm}}$$

$$\frac{7}{9} = \underline{\hspace{2cm}}$$

$$\frac{8}{9} = \underline{\hspace{2cm}}$$

One of these decimal representations is not like the others. Why?

**Enrichment:**

2. Chandler tells Aubrey that the decimal value of  $-\frac{1}{17}$  is not a repeating decimal. Should Aubrey believe him? Explain.

3. Complete the quotients below without using a calculator, and answer the questions that follow.

- a. Convert each rational number in the table to its decimal equivalent.

$\frac{1}{11} =$	$\frac{2}{11} =$	$\frac{3}{11} =$	$\frac{4}{11} =$	$\frac{5}{11} =$
$\frac{6}{11} =$	$\frac{7}{11} =$	$\frac{8}{11} =$	$\frac{9}{11} =$	$\frac{10}{11} =$

Do you see a pattern? Explain.

- b. Convert each rational number in the table to its decimal equivalent.

$\frac{0}{99} =$	$\frac{10}{99} =$	$\frac{20}{99} =$	$\frac{30}{99} =$	$\frac{45}{99} =$
$\frac{58}{99} =$	$\frac{62}{99} =$	$\frac{77}{99} =$	$\frac{81}{99} =$	$\frac{98}{99} =$

Do you see a pattern? Explain.

- c. Can you find other rational numbers that follow similar patterns?
